

# Likert Scale

Find number of fiber bundles from volume rendering of data set1

Find number of fiber bundles from the color-mapped eigenvector of hessian matrix

Hessian based visualizations perform better than DV rendering

Find number of fiber bundles from MetaTracts fiber bundles

MetaTracts visualizations perform better than DV rendering

MetaTracts 2D slices visualizations perform better than 2D slices of original data

Find largest fiber bundle from set of MetaTracts fiber bundles

Find smallest fiber bundle from set of MetaTracts fiber bundles

Find most similar fiber bundle to given fiber bundle, from MetaTracts extracted bundles

MetaTracts visualizations perform better in finding largest, smallest and similar looking bundles than DV rendering

Meshes generated from MetaTracts provide better spatial context than volume rendering
